Thermostat

Liquid Expansion Type – Model HC1

The Electrotherm 'HC1' Thermostat provides low-cost, coarse accuracy temperature control of products being heated by Electrotherm Heater Jackets, Drum Heaters and IBC Heaters. Temperature is sensed by insertion into the product, or, by air-sensing inside jackets

The Electrotherm 'HC1' Thermostat is available with stainless steel stems of various lengths for liquid insertion, or, with flexible stainless steel conduit for air-sensing applications. Accuracy of approximately $\pm 3^{\circ}\text{C}$ is maintained by switching power to the Heater.

SPECIFICATION

220-240V 50/60Hz 10A
Adjustable Temperature Range: 30°C to 110°C

Manufactured and supplied by:
ELECTROTHERM PTY LTD
10 Keppler Circuit, Unit 4, Seaford, Victoria 3198, Australia
