***ThermaCon*® Meals Delivery Container**

The *ThermaCon* is a purpose built container for maintaining temperature of hot delivered meals and is produced specifically for Meals On Wheels service. Its design, complying with Australian Safety Standards*, represents the latest methods in mechanical construction and advances in materials and thermal performance.

Built entirely of light-weight aluminium, the *ThermaCon* is a robust appliance that will give long service life with daily use. It features multi-layer thermal insulation barriers combined with wide-area carbon-graphite, low voltage, electric heating elements fitted inside the container walls that spread heat evenly over internal surfaces.

The *ThermaCon* features unbreakable lifting ledges, non-slip lid and a flat base - all to extend service life of the container.

High quality 'quarter-turn' bayonet locking plugs connect power to the *ThermaCon*. Thermostat control regulates temperature and reduces power consumption when the container is filled with hot meals. The *ThermaCon* can be pre-heated from mains power via a plug-pack power supply and powered mobile by a cigarette lighter power cord or deep-cycle rechargeable battery.

SPECIFICATION

12V d.c. 72W (12-15V d.c. acceptable)

Normal temperature regulation by Auto-reset Thermostat: 70°C +/-5°C

Abnormal temperature limiting by Thermal Cutoff: 144°C +0°C -4°C

Size: External 640x345x275(H)mm; Internal 545x310x225(H)mm

Weight (empty) including Lid: 7kg

Capacity: 38 litres - 24 meals (4 stacks of 6) plus 12 sweets (2 stacks of 6)

* Complies with AS/NZS 60335.2.15: 2002 + A1, A2, A3, & A4 [Part 2] & AS/NZS 60335.1: 2002 + A1, A2, & A3 [Part 1].

Manufactured and supplied by:
