CoolaCon® Meals Delivery Container

The *CoolaCon* is a purpose-built container for maintaining low temperature delivered meals and is produced specifically for Meals On Wheels service. Its design represents the latest methods in mechanical construction and advances in materials and thermal performance.

Built entirely of light-weight aluminium, the *CoolaCon* is a robust appliance that will give long service life with daily use. It features multi-layer thermal insulation barriers that reduce heat conduction into the container where chilled meals are covered with frozen ice-pack.

The *CoolaCon* features unbreakable lifting ledges, non-slip lid and a flat base - all to extend service life of the container.

SPECIFICATION

Size: External 640x345x275(H)mm; Internal 545x310x225(H)mm
Weight (empty) including Lid: 7kg
