Pizza Bag Heater

The Electrotherm *Pizza Bag Heater* is a convenient retro-fit heating system for pizza delivery bags and other meals containers. It is designed to maintain temperature of hot delivered meals by helping compensate heat loss that would otherwise occur during delivery. Its construction represents the latest methods in mechanical assembly and advances in materials and thermal performance.

The *Pizza Bag Heater* improves customer service efficiency by helping hold meals at elevated temperature until ready for delivery, then maintaining temperature during longer delivery runs*.

Manufactured from light-weight, food-grade stainless steel, the *Pizza Bag Heater* is a robust, low-profile appliance that will return long service life with daily use. It features unique carbon-graphite heating elements that spread heat evenly over the Heater's entire surface.

The *Pizza Bag Heater* is simple and safe to use: it is a 'safety extra-low voltage' appliance and can be connected to 240V mains power through a transformer or directly to 12V vehicle power by cigarette lighter power cord while mobile. Sealed rechargeable batteries can also be used to power the Heater.

High quality 'quarter-turn' bayonet locking plugs and mating sockets connect power to the *Pizza Bag Heater*.

SPECIFICATION

12V d.c. 60W
Size: 400x400x6mm
Weight: 1.4kg

* Depends on construction and thermal insulation efficiency of bag.

Manufactured and supplied by:
Electrotherm Pty Ltd
10 Kepler Circuit, Unit 4, Seaford, Victoria 3198, Australia
