## Drum Insulation Jacket

The Electrotherm **Drum Insulation Jacket** provides an efficient thermal barrier against heat loss for products heated in 205 litre (44 Imp Gal., 55 US Gal.) steel or plastic drums.

The **Drum Insulation Jacket** is an ideal companion to the Drum Base Heater (see separate brochure) providing higher product temperatures by locking heat inside the Jacket. Product temperature remains even and consistent throughout the drum.

### CONSTRUCTION

The Insulation Jacket is made from heavy-duty PVC coated rip-stop, warp-knit polyester which is flexible, durable, washable and flame retardant. It is resistant to most acids, alkalis and most solvents. Internal multi-layer thermal insulation consists of polyester and aluminium foil. Industrial grade zips make it easy to install the Jacket around a drum.

Manufactured in Australia by:  
Electrotherm Pty Ltd
